Technical Field The present invention relates generally to the field of computer systems, and more specifically, to debuggers for computer systems. 2. Background Art In debugging a computer system, it is desirable to be able to monitor the execution of the computer system's code. Debuggers allow a software developer to watch code execute during the debugging process and take actions or perform certain tests on that code. Some debuggers execute the code on the target computer while others execute code on the developer's computer. A debugging system must be able to execute code as fast as possible. Speed is very important in the computer industry because of the increasing demands for computer power and speed. Debuggers may, for example, take weeks or even months to debug a large computer program. The code may need to be debugged in many different environments, or software settings, before the code may be released. To increase the speed of debuggers, many debuggers use a "single-stepping" mode where the debugger pauses the program to determine the next instruction to execute. While in this single-stepping mode, the code can be viewed as the debugger executes it. To pause the program, many debuggers use the "breakpoints" method, where a breakpoint is placed at a certain location in the code and the program is halted. A breakpoint is typically a "software breakpoint" where the program's execution is halted and the program is paused at a predetermined location in the code. Breakpoints are typically placed during the initial testing of a program or

I don't want to live in a world where it's okay to talk to children in ways that demean them and the people who love them. It's not okay. You don't know who I am, because I don't know who you are. We're all the same. We're all the same in that we need to be loved, and need people to believe that we are good, and we deserve to be loved. It's the same for a child as it is for a grown-up. All of us are human beings. We need love. We need acceptance. We need to be treated as people. We need to be respected. So, no, I don't want to be like you. I don't want to be like you. I can't ever, and I won't ever, treat children like this. You've done enough damage already. You don't have to tell them anything. You don't have to tell them anything they can't understand, or protect them from anything they can't cope with. You just don't have to say anything to them. Stop.
