Q: MAMP, php5-fpm, php7-fpm php sessions issue I'm running a wordpress website, and using php7-fpm. All is good, but one thing: The sessions don't work. I've tried enabling session.save\_handler in php.ini, and php\_value session.save\_path to /Applications/MAMP/tmp as stated here: but it still doesn't work. The problem is that I can't really figure out what else to check atm.

A: I'm an idiot. I was overwriting the session.save\_path in a bad place, and there was a bad value in one of my functions. the problem wasn't in the problem of session management, just the way I was overwriting a key in a form.

Q: JMSSerializerBundle - How to customize attribute name

How to customize attribute name in JMSSerializerBundle. I want use locale specific keywords instead of serializer field name. Is possible to implement this? Example: I have field "credit" and want change it name from "credit" to "credit\_pl" or "credit\_en".

A: You can override the serialization process by creating an own serializer class in addition to the default one, as suggested by @magrofiliomangeli
